Office 365 Technical Fast Track

Preliminary Assessment

With the standardized preliminary assessment your technical environment will be analyzed to ensure smooth deployment. This phase is required to ensure your Office 365 readiness and to determine any corrective actions, if needed. Also the user management model and practices are defined during this phase.

Single-Sign-On

Active Directory Federation Services (ADFS) will be installed for Office 365 to allow single-sign-on. The installation includes all necessary configuration and testing for smooth operation.

Office 365 DNS Configurations

You will be provided with appropriate specifications for DNS settings for the services required.

Office 365 Network Configurations

You will be provided with the appropriate network configurations for the services needed, such as for the ADFS farm and Lync traffic.

Certificates

Office 365 service uses several different types of certificates. We will guide you to choose the right kind of service certificates - or do it for you, if required.

Maintenance Models

We will guide and train your administrators for good maintenance practices and models. In addition to the basics, you will learn about the desktop settings and other key areas.

Script Automation

We will do the automation for you. User management scripts for preparing users and scripts for activation of licenses are provided. Scripts utilize user profile information in your Active Directory (AD).

Documentation

The delivery includes full installation report as well as detailed descriptions of the network architecture.

Additional Services

- Server operating system installations
- Workstation Office 365 installations
- Office 365 training
