

## For Immediate Release

Press Release – 20<sup>th</sup> of December, 2012 - Turku, Finland

## Neoxen Platform in EU-South Korea Project

Neoxen Systems, Centria University of Applied Sciences and University of Jyväskylä joined forces in research and piloting in EU-South Korean initiative ([KE-LeGE](#)). The cooperation was conducted within [Systemic Learning Solutions](#) value network as part of the [Tekes Learning Solutions](#) Programme.

“International pilots are important part of our R&D activities. Working together in a multicultural group of diverse people gives us valuable understanding of human interaction with software”, says **Esa Tervo**, Chief Executive Officer at **Neoxen Systems**. “Successful combination of research, practical tasks and real world challenges of an ongoing project is an exciting mix. We are more than happy to continue this joint venture in the next phase.”

### About KE-LeGE

*“KOR-EU Leaders for Global Education joint project ([KE-LeGE](#)) aims to promote competencies of global education for young leaders in Korea and EU countries. The targets are undergraduate students who will become primary and secondary education teachers.”*

As in any other profession, education needs global influences as education aims to raise students who will live in the 21st century when globalisation is much more inevitable.

The main framework of KE-LeGE comes from the framework of competencies for our 21st century students (Cisco, 2010): ways of thinking, ways of working, tools for working, and living in the world. Global education pursues the globalisation and internationalisation of educational services, developing young educational leaders of the future who are aware of global issues and have competencies in intercultural sensitivity.

The Korean education system actively adapts global aspects in school activities. In the EU, the Bologna process member countries have delivered global education through the [Bologna process](#). In order to adopt these movements effectively, it is crucial to have professional development for global education.

**Finland** and **Korea** are leading nations as evaluated by the **PISA survey**. Their cooperation in the project will bring significant added value to the development of future competences in global education.

### **About Systemic Learning Solutions**

*"Promoting the 21<sup>st</sup> century skills, Finnish educational know-how and innovative learning solutions globally."*

The Systemic Learning Solutions ([SysTech](#)) project promotes the learning and teaching of 21<sup>st</sup> century skills with the aid of Finnish educational know-how and technological learning solutions. We aim to make systemic learning solutions an integral part of the Finnish education system as well as an essential part of Finnish education export. The goal is that systemic learning solutions are validated and implemented on a large scale into different educational systems.
